Secure Managed Image Storage Services

*Always Ready For
the Unexpected!*

ACCESS Ability... *To the Images that Empower Patient Care...To the Benefits that Drive Business.*

Today, how imaging data is stored is vitally important, with the demand for ultra-reliable, realtime image access...multiple PACS vendors and formats...the need to communicate beyond the enterprise...and ever-growing volumes of data.

digiTAP²™ Managed Image Storage Services provide the answer. More than just a secure, HIPAA-compliant image repository, digiTAP²™ storage services are fail-proof insurance for image access during any disaster, natural or manmade. They manage, protect and maintain the integrity of your vital images, whatever happens. They enable you to transmit and transfer data seamlessly as well as migrate it to a new PACS solution. And they provide absolute assurance that your images will be at your physician's fingertips whatever the future brings.

Enjoy a comprehensive solution customized to your needs, with broad range of options. If you prefer, phase in offerings over time, while eliminating hardware capital expense, maintenance and technological obsolescence.

- Vendor Neutral Archiving
- Information Lifecycle Management
- Incremental Storage
- Image Sharing
- Primary Archiving
- Disaster Recovery
- Data Migration
- Business Continuity

Secure Image Storage Always Within Reach!

Designed for Today's
Challenging Healthcare
Environment

- Tier IV Electrical Power
- Highest Level of
HIPAA/HITECH Security
- Multiple Data
Redundancy
- Cost-Effective
Per-Study Pricing
- Customizable Options
- Ongoing Technology
Upgrades

Results that Exceed Expectations

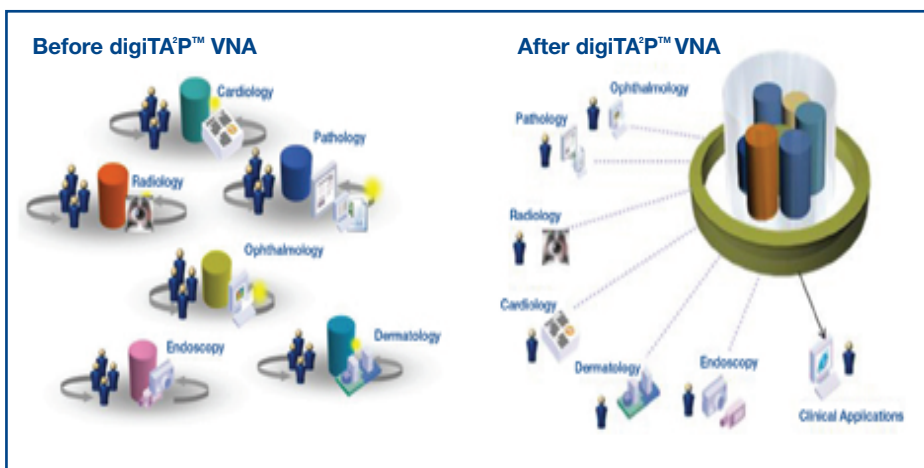

The SourceHOV Private Cloud

You'd hardly store your excess hardcopy images in a public bus station locker. So why archive your vital digital images on the public cloud? SourceHOV's managed, secure private storage facilities, hosted by GNAX, offer the anytime, anywhere image access and scalability of a public cloud with none of the inherent risks. Optimized for healthcare, SourceHOV's digiTA²P™ managed storage solutions offer full HIPAA and HITECH compliance and secure infrastructure running Acuo Technologies' advanced DICOM Services Grid. You'll take advantage of costs that benefit from an economy of scale for all data center critical systems that insure redundancy of power, water and fire abatement. Our Tier IV power architecture is engineered for high-density and critical power needs — and yours will be too.

Your Philosophy is Our Philosophy

Many healthcare facilities prefer an evolutionary approach to next generation solutions rather than locking into single-product limitations on future options...and SourceHOV agrees. This has been an important part of our philosophy throughout our 30 year radiology image management heritage. We are committed to helping you craft a solution based on your mission and strategy, wherever it takes you. Whether your goal is migration to an open standards VNA today or a transitional approach to business continuance that moves you closer to a VNA within your current PACS, we will work with you. The value proposition with our storage solutions is that you retain data ownership, not your PACS vendor. Then, when implementing your next PACS, the game will have changed, with greater options available to you for interoperability, superior security and reliability at significantly lower costs.

For more than 30 years, SourceHOV has been a leader in offsite archiving and DICOM file management through its TAP™ (Total Accessibility Archiving Program) and mammoTAP™ solutions. The company also draws on its expertise as a 10 year leader in broad-based digital document and image management.
