

Create a Powerful Magnet for New Patients and Profits

Relaxing images, favorite movies, serene symphonic sounds—immerse your patients in a virtual world, and build new referrals and profits. Resonance Technology's advanced MRI-compatible entertainment systems create a virtual MRI comfort zone, helping soothe anxious patients and minimize the claustrophobia that often disrupts exams.

Since 1988, Resonance Technology has been the recognized leader in MRI-compatible electronics, enabling imaging specialists to boost exam throughput, patient satisfaction and business success by delivering a dramatically better scanning experience.

Discover the benefits hundreds of satisfied medical professionals have enjoyed with Resonance Technology:

- More accurate scans and elimination of rescans
- Decreased exam set-up time
- Increased patient throughput
- Faster exam throughput and reduction of patient waiting time
- Increased patient retention
- A competitive edge resulting in increased referrals
- Increased technologist job satisfaction and greater staff retention

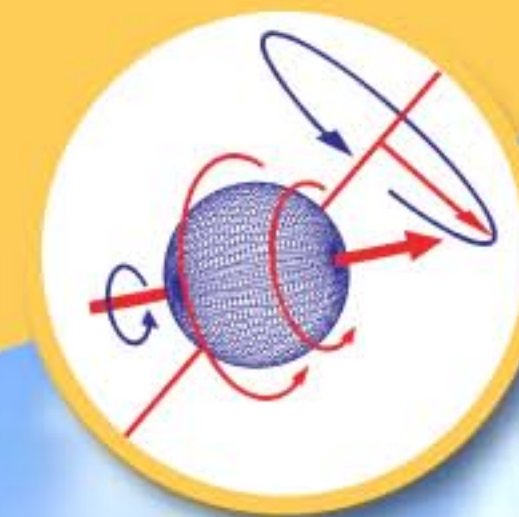

Your MRI represents a significant investment in your practice. A comparatively small added investment in a Resonance Technology system will help utilize your scanner at full potential every day... for virtually every exam. Our systems rapidly pay for themselves.

...And our Functional MRI (fMRI) systems for clinical and neuroscience brain research also set new standards in the field.

RESONANCE TECHNOLOGY

Innovative MRI-Compatible Virtual Entertainment Systems
Advanced Functional MRI Systems

Pleasing Patients / Powering Profits

Revolutionizing MRI

There's a revolution going on deep inside the magnet bore. Resonance Technology is dramatically transforming the MRI experience, leading to better and faster exams.

Opening new horizons in realistic, relaxing entertainment, our CinemaVision virtual reality system leads the market with its ultra-high performance, versatility and advanced features. Its sleek, lightweight integrated audio-video headset delivers a stunning 3D sight and sound experience.

Cutting edge SereneSound audio system rivals conventional stereo sound, bringing concert-performance realism into the magnet room, whether from CDs, tapes, TV or radio.

Advanced Resonance Technology funcLAB is a turnkey fMRI solution that combines both task presentation and fully automated data processing, enabling even those unfamiliar with fMRI to master these complex exams.

For MRI-compatible technology, select the leader. Enjoy breathtaking performance, reliability, upgradeability and ease of installation and use—as well as the highest return on your investment. Contact Resonance Technology today.

Relax - It's Easy... and Advanced

From ultra-fast exam set up and open patient communications to flexible installation, our systems lead the market with a range of premium features.

Engineered with the highest commitment to quality, our products eliminate complex learning curves to keep your busy practice on track. Our components are designed for simple, cost-effective upgrade and repair, while Internet monitoring detects minor problems, which are typically remedied before they have any impact.

With a sharp eye on the future, we are committed to rapidly incorporating new technologies, with proven product upgrade paths.

Resonance Technology consults extensively with researchers, technologists, physicians and patients to ensure the most functional, flexible and versatile products available today.

MRI Laserlink

Breathtaking Realism - Lightning Fast Installation

Enabling Resonance Technology's high performance and easy installation is patented MRI LaserLink technology, which relies on a single-fiber digital-optical connection between the audio-video output device and magnet room. With this technology, even our most sophisticated system is almost plug-and-play.

The chance of damaging your equipment and magnet room shielding is virtually eliminated. All equipment installs in just minutes, without engineers, complex wiring or drilling into costly equipment. And you don't have to shut down your valuable MRI for even one appointment for installation.

Other systems still rely on outmoded analog connections with poor sound and lengthy set-up. Resonance Technology is defining the future in MRI-compatible electronics performance.
